EDUCATION

University of Washington

Sept. 2024 – June 2028

B.S. Computer Science, Paul G. Allen School | Minor in Business Administration, Foster School Seattle, WA

Relevant Coursework: Data Structures & Algorithms, Database Management Systems, Discrete Mathematics, Probability & Statistical Modeling, Graph Algorithms, Asymptotic Analysis, Computer Systems, Financial & Managerial Accounting, Linear Algebra

Honors: Dean's List Recipient

TECHNICAL SKILLS

Languages: Java, Python, C, JavaScript, HTML, CSS

Tools: SQL, SQLite, Git, Linux/Unix, VS Code, Overleaf, Tableau, Active Directory, GitHub Copilot, LLM APIs

Productivity & AI: Claude, Gemini, OpenAI, Google Workspace, Microsoft Office, Canva

Concepts: Algorithms, Data Structures, Database Systems, Relational Schemas, Memory Management

PROFESSIONAL EXPERIENCE

Computer Support Technician

June 2026 – Present

UW Medicine Dean of Medicine IT Seattle, WA

- Provision, image, and update hardware deployment pipelines for faculty and staff devices across Windows 10/11 operating systems.
- Streamline user onboarding by managing user tickets, configuring internal web systems, and accurately provisioning permissions via Active Directory and Microsoft 365.
- Maintain hardware inventory databases and spreadsheet management systems to optimize tracking accuracy.

CSE 123 Teaching Assistant

March 2026 – Present

Paul G. Allen School of Computer Science & Engineering, University of Washington Seattle, WA

- Led weekly 1-hour quiz sections of ~15 students, designing and facilitating practice problems on data structures, recursion, and object-oriented programming in Java.
- Evaluated weekly programming assignments for ~20 students, providing constructive written feedback to support learning and code quality.
- Staffed the Introductory Programming Lab (IPL) 1 hour per week, offering real-time debugging and conceptual support across CSE 12x assignments.
- Collaborated with course staff in weekly 2.5-hour meetings, new TA training sessions, and grading meetings to maintain consistent instruction standards, develop teaching skills, and calibrate fair student evaluation.

PROJECTS

Disaster Relief Allocation System | Java

May 2025

- Implemented a recursive algorithm to explore feasible allocations of limited resources across regions.
- Modeled population and cost constraints to maximize the number of people helped within a fixed budget.
- Implemented tie-breaking logic and edge cases to prioritize cost-efficiency when multiple optimal solutions exist.
- Optimized recursive search space by pruning invalid allocation branches, reducing algorithmic execution paths under budget-constrained edge cases.

Seattle Sidewalk Accessibility Analysis | JavaScript, Tableau

February 2026

- Analyzed 1000+ spatial data points from the open-source Project Sidewalk dataset to quantify and map infrastructure barriers across distinct Seattle neighborhoods.
- Built an accessibility scoring system to quantify and compare barrier severity across Seattle neighborhoods.
- Designed interactive Tableau dashboards to visualize barrier frequency, type, and geographic distribution.
- Presented findings and infrastructure recommendations as part of the DubsTech Datathon 2026.

PERSONAL

Interests: Baking, Hiking, Reading, Running, Skiing, Traveling
